Dorchester Aesthetics Centre,
4a Trinity Street,
Dorchester,
DT1 1TT

(Opposite Basilico Restaurant).

[Treatments available from i-facial Aesthetics.](#)

What are anti-wrinkle injections?

Anti-wrinkle injections are commonly referred to as 'Botox', short for Botulinum toxin. This is a naturally occurring protein that causes the muscles of the face to relax, consequently smoothing out wrinkles. It is the UK's most popular cosmetic treatment for the removal of wrinkles.*

Non-surgical Eye Lift - Plasmage

This 40 minute treatment reduces hooded heavy brows and tightens the skin on the upper and lower eyelids. It is a non-invasive alternative to upper eyelid surgery. The technology is known as "Plasmage". It can also be used to treat lines around or under the eyes or remove Facial/Body lumps and bumps.

What is facial filler?

Has the skin on your face lost its firmness and fullness? Do you have deep wrinkles? Or a facial scar? If so, a facial filler treatment may be the perfect solution.

Facial fillers (also known as dermal fillers) use a natural gel to smooth out wrinkles, folds or scars to give your face a younger, refreshed more plumped appearance. If the skin on your face has lost its firmness and fullness, a facial filler treatment may be the perfect solution.

Dermal filler is a naturally-occurring hyaluronic acid gel that is injected into the face to smooth wrinkles and folds (especially around the nose and mouth). It is also used to plump out scars or dents in the face and to define and enhance lips, reshape the nose, or define and plump out cheeks. The filler will also attract collagen and hydrate the areas treated to give a healthy looking skin appearance.

What is non-surgical cheek enhancement?

This procedure is used to lift and rejuvenate your cheeks, all without the need for surgical operations. We use facial fillers (made from natural gel) to improve the appearance of your cheeks and combat saggy, aged-looking skin.*

What is non-surgical lip enhancement?

Are you sick of thin or poorly-defined lips? Does your smile need plumping? I-facial Aesthetics can offer you gorgeous, luscious lips without the need to go under the knife.*

Non-surgical Lip Enhancement is a very popular treatment offered by David ati-facial. It is suitable for anyone who would like fuller lips. The safe, efficient lip-enhancement procedure can replace the volume and definition that ageing has taken away; it can also be used to create balance between the upper and lower lip*.

What is Profhilo?

If you would like to rejuvenate your skin, treat sagging & loose skin and obtain a more youthful appearance for your face, neck or hand our new treatment -PROFHILLO is the treatment for you!

Profhilo is in between a skin booster and filler which delivers hyaluronic acid via a small syringe 3mm into the skin. The gel like formula spreads beneath the skin like honey, stimulating collagen and elastin and provides an instant, smoother, glowing skin.

A non-surgical face lift that's exceptionally effective*

If you would like to fight the signs of ageing in the lower part of your face, a **Silhouette Soft® thread lift** may well be the best possible option. This innovative treatment (also known as a 'one stitch face lift') uses bidirectional absorbable thread cones to lift and rejuvenate your facial skin, resulting in a fresher, more youthful appearance.*

What is Hyperhidrosis?

Are you sick of embarrassing sweat patches? I-facial Aesthetics have the solution!

Hyperhidrosis is the medical term for excessive sweating. Perspiration is a perfectly normal bodily function, and sweat plays an important role in moderating the body's temperature. However, hyperhidrosis sufferers sweat more than necessary, and this can be both uncomfortable and – if sweat patches become visible – embarrassing. Hyperhidrosis is most commonly associated with the axilla (armpit), but it does affect other parts of the body, including the hands, face and feet.
